Bacolod City, Negros Occidental, Philippines

PROFESSIONAL SUMMARY

AI/ML and full-stack software engineer with 1.5 years of professional experience in healthcare IT and AI-native business systems, plus 5 years of freelance and academic projects. Champion, Best Thesis (19th ICT EXPO 2025), with published computer vision research and an MS in Computer Science in progress. Builds Laravel, React/TypeScript, and PostgreSQL systems with AI workflows such as RAG, multi-agent orchestration, and local LLMs.

PROFESSIONAL EXPERIENCE

Jan 2026 – Oct 2026 AI Systems Engineer Rosian Liaison Services

- Delivered an offline AI legal-document generation system (Deeds of Absolute Sale; DOCX and PDF output) on local LLMs (Llama 3.1 8B, CodeGemma, Qwen2.5-Coder) running on a single RTX 3060, removing cloud dependence and typist errors; it began as a Jan–Mar 2026 contract and became this role.
- Cut task execution time by 70% from ~20 min to ~7 min, manual workload on repetitive daily operations by 80% from ~5 hrs to ~1 hr per day, and department overhead by 67% from ₱15k to ₱5k through background AI orchestration, without headcount replacement.
- Designed an AI-native architecture of 5 specialized agent skills with RAG knowledge-base integration, backed by a PostgreSQL schema for vector embeddings, knowledge bases, and multi-agent logs.
- Implemented a Qwen2.5-VL pipeline that extracts structured text from hardcopy records, plus HTML template parsing that preserves text styling.
- Held AI cost to about ₱1.11 (≈ US$0.02) per completed task by optimizing context usage and API round-trips.
- Shipped legal-services features with PHP/Laravel (Livewire, Filament, Alpine), React/TypeScript, Tailwind, Redis, and PostgreSQL.
- Named Best Staff of Q2 and Q3 2026 for operational savings and AI workflow integration.

Jun 2025 – Jan 2026 System Developer Adventist Medical Center Bacolod

- Led maintenance and improvement of a custom HR information system (C#/ASP.NET WinForms, MSSQL), resolving production issues and clearing 60% of the outstanding fix backlog.
- Engineered a shift scheduling module with shift-swap and approval workflows and the supporting MSSQL schema, built from requirements gathered with HR stakeholders and reducing manual scheduling overhead.
- Earned ICare Champion for Q3 2025 for service excellence; contributed to hospital-wide research initiatives.

Mar 2025 – Jun 2025 Software Developer Riverside Medical Center Inc.

- During a practicum placement, designed and developed the institution's doctor directory web application (PHP/Laravel, Livewire, PostgreSQL), including the schema for search, filtering, and record management.
- Collaborated with the institution's engineers through iterative feedback cycles, reaching 85% UX satisfaction while refining the database schema from technical review.

2021 – Dec 2024 Freelance Full Stack Developer Self-employed (retainer clients)

- Built MERN-stack (MongoDB, Express, React, Node.js) applications for local business owners.
- Developed a multi-business financial management platform (Laravel, PostgreSQL, React/TypeScript) covering sales, payroll, and capital movements, with PDF reporting and GitHub Actions CI/CD.

SKILLS

Agentic AI: multi-agent orchestration, tool / function calling, prompt engineering and compression, context window optimization

LLM / RAG: RAG, pgvector and vector databases, Ollama (local LLM deployment), Llama 3.1, Qwen2.5-Coder / Qwen2.5-VL, CodeGemma

Computer Vision: YOLOv8, YOLOv11 (detection, instance segmentation), VLM-based OCR, Re-ID tracking

Engineering: Python, PHP (Laravel, Livewire, Filament), JavaScript / Node.js, React / TypeScript, Tailwind CSS, C# / ASP.NET WinForms, REST APIs

Data & Infrastructure: PostgreSQL, MSSQL, Redis, Docker, CI/CD (GitHub Actions), Git

AI-Assisted Development: Claude Code, GitHub Copilot

EDUCATIONAL BACKGROUND

MS Computer Science	*2025 – present*	Recoletos de Bacolod Graduate School (9 units completed)
BS Computer Science	2021 – 2025	STI West Negros University

RESEARCH & PUBLICATIONS

AI-Driven YOLOv11 Instance Segmentation Model for Automated Seashell Detection, Classification and Harvest Assessment in Coastal Communities of Negros Occidental (co-author) — Published Sept 2026 (ISTES)

AWARDS & RECOGNITION

- Champion, Best Thesis, 19th ICT EXPO 2025
- Champion, ICT Olympics 2024 (Web Design and Development)
- Invited industry panelist, Computer Science program, STI West Negros University (alma mater; ongoing)
